

Project Presentation

RepairTrace

Vehicle Repair Transparency & Digital Service History

What is RepairTrace?

RepairTrace is a digital vehicle service management platform designed to replace verbal updates with a verifiable digital journey.

Which repair process management system should you adopt?

Project Objectives

Building trust through digital transparency and permanent service records.

Digital Inspection

Record vehicle health and issues digitally.

Evidence Storage

Store photo and video evidence for every repair.

Customer Approval

Allow owners to approve estimates before work begins.

Progress Tracking

Real-time updates on technician repair tasks.

Service Timeline

Maintain a permanent, timestamped service log.

Digital Invoicing

Generate clear, itemized digital invoices.

Why RepairTrace?

The Digital RepairTrace Timeline: Every action leaves a verifiable trace.

Every important service action creates a digital record containing the Action, Technician, Timestamp, Description, and Evidence.

RepairTrace Workflow

Identification

Approval &
Progress

Role-Based System Architecture

Customer Role

- Manage vehicles
- Book services
- Approve estimates

Technician Role

- Perform inspections
- Report issues
- Update progress

Service Advisor Role

- Manage bookings
- Create estimates
- Generate invoices

Admin Role

- System administration
- User management
- Reporting

System Modules

User & Access

Authentication and role-based permissions.

Vehicle & Booking

Management and service orders.

Inspection & Repair

Evidence management and task tracking.

Finance

Estimates, approvals, and invoices.

Management

Inventory, notifications, and analytics.

Customer Experience

My Vehicles

Quick access to registered vehicle details.

Active Services

Real-time status (e.g., "Repairing - 70%").

Pending Approvals

Instant notification for new estimates.

The customer always knows the current status of their vehicle.

Technician Workspace

A focused environment for managing inspections and active repairs.

Assigned Vehicles

Clear list of today's work.

Inspection Workflow

Step-by-step issue reporting.

Evidence Upload

Direct attachment of photos to specific issues.

Inspection & Evidence

Don't just tell the customer. Show the customer.

Technicians record inspection results with severity levels (Critical, Needs Attention, Good) and attach photo/video evidence directly to issues. Examples include Brake Pads: Worn (Critical) + 3 Photos attached, Battery: Needs Attention (Voltage low), and Tyres: 40% Remaining (Warning).

Transparent Repair Approval

Itemized Costs

Clear breakdown of every charge.

Digital Consent

System stores decision, date, and time.

Accountability

No unauthorized work or hidden fees.

No surprise repairs:
customers approve
estimates before work
begins.

RepairTrace Service Process Timeline

From Repair to Permanent History

Every completed service becomes part of the vehicle's permanent digital record.

Digital History helps maintain vehicle resale value and maintenance health.

Final Invoice

Provides a detailed breakdown of costs

Digital History

Maintains a chronological log of services

Database Architecture for High Integrity

RepairTrace Technology Stack

Frontend

HTML5, CSS3,
Bootstrap/Tailwind,
JavaScript, AJAX

Database

PostgreSQL for robust data
management

Backend

Python, Django, Django REST
Framework

Infrastructure

Redis and Celery for
background tasks

Which strategic focus should prioritize development resources?

Thank You.
Conclusion Questions?

Conclusion

RepairTrace transforms vehicle servicing
into a transparent digital experience.
